

Executing Projects **on Time** and on Budget

The aviation business requires its main stakeholders to operate with a high level of safety, efficiency and cost effectiveness. Organisations are frequently confronted with change and the need to implement these changes quickly to remain competitive.

YOUR CHALLENGES

To maintain a safe and cost-effective operation is the main goal of the organisations working in the aviation business. However, frequently these organisations are faced with changes that are regulatory or operational changes initiated either from internal or external stakeholders. Having the right experience in-house to manage these changes and to meet all requirements within a given time frame and budget can create unwanted challenges. Even though an organisation might have the right level of competence internally, sometimes the available staff capacity can quickly become the bottleneck.

OUR BACKGROUND

With more than 30 years in the aviation business we have successfully completed over 1,000 projects for customers worldwide. Our experts are well experienced in various roles from simple project support roles to project experts and leading and managing work packages, projects and programmes.

OUR APPROACH

All our services are tailored to the individual customer and their specific environment and are based on standard concepts and methods to ensure conformance. These methods are well-proven and lead to cost-effective solutions for our customers. Our solutions meet the highest international standards regarding safety, applicability and quality.

- We are committed to long-term relationships with our customers
- We are experienced in managing unexpected changes during all stages of the project
- We believe in the lessons learned philosophy and ensure that our experts are well trained and have the right level of competencies for any project assignment

Project References

International Organisations

Managing the Project Implementation Units responsible for the programme management following bank rules (Azerbaijan, Tajikistan, etc).

Assessment of major programmes (NATO): Support to the customer in providing independent assessment of NATO-wide C2 programmes/projects in selected Air and Missile Defence System areas.

Airports and ANSPs

Major airport programmes (Vágar, Greenland, Copenhagen, Dubai, Al-Maktoum, etc.): Managing multi-project programmes involving airport infrastructure upgrades, procurement of technical equipment, airport extensions, etc.

For ANSPs (Brunei, Cameroon, etc.): Establishing Programme Support Organisations, manuals and procedures.

For ANSPs (FAB CE): Providing specialist staff to support Programmes Support Organisations.

Strategic Planning

- Strategic analysis
- Industry developments
- Area of improvement
